Experience

Software Engineer, AMTERP, Mumbai

October 2024 – October 2026

- Developed and optimized API integrations processing 10,000+ e-commerce orders daily using .NET Core, EF Core, Dapper, GraphQL, MySQL, and Angular, improving processing speed by 30%.
- Led Amazon FBM integration during a production-critical phase; gathered client requirements, completed development independently, and delivered within deadline, resolving 5+ high-priority issues with zero defects reported.
- Managed requirement gathering for 8+ client integrations through emails and discussions, ensuring clear scope and reducing dependency on senior team members by 50%.
- Created an internal GraphQL testing tool that reduced validation time from days to hours, improving testing speed by 80%.
- Introduced Prism-based API testing to generate test data over network calls, reducing reliance on static mocks and improving test accuracy by 50%.

Technical Skills

Languages: Java, C#, Python, SQL, JavaScript, TypeScript.

Frameworks & Libraries: .NET Core, EF Core, Dapper, Angular, NestJS, GraphQL, WebSockets, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST API's, Microservices.

Database: MySQL, MongoDB, Redis, SQL Server.

Cloud & Devops: Docker, Kubernetes, Jenkins, GitHub Actions.

Messaging: Kafka, RabbitMQ.

Concepts: Object-Oriented Programming, SOLID Principles, Design Patterns, System Design, Distributed Systems, Performance Optimization, Caching.

Tools: Git, GitHub, Jira, Maven, Gradle, IntelliJ IDEA, Visual Studio.

Projects

Complyco – [Spring Boot, GraphQL, Hibernate, SQL Server] View Project

- Designed a meeting checklist module within an ERP platform, enabling users to create and manage checklists, reducing manual tracking effort by 55%.
- Implemented scenario-based filtering using user-selected criteria, improving task discovery time by 40%.
- Enforced role-based access control for 1,000+ users, preventing unauthorized access across modules.
- Enabled task assignment across user networks, increasing task completion rates by 30%.
- Integrated calendar sync with Google Calendar and Microsoft Outlook and supported in-platform document editing, improving scheduling efficiency by 50% and reducing external tool usage by 45%.

API Request/Response Visibility Dashboard [Angular, DotNet Core, GraphQL, SQL Server]

- Engineered a client-facing API debugging dashboard using Angular, Spring Boot (GraphQL), and SQL Server, enabling real-time visibility across 50+ endpoints.
- Reduced support ticket volume by 35% by enabling non-technical users to independently trace API issues.
- Decreased engineering escalations by 30%, improving issue resolution turnaround time.
- Facilitated filtering and search across API logs based on client, timestamp, and routes, improving debugging efficiency by 40%.

Education

SIES Graduate School of Technology, B.E. in Computer Engineering

Achievements

Recognized as Rising Star at AMTERP for exceptional quality of work and dedication.

LeetCode: • Solved 600+ problems on LeetCode, ranking in the top 4%.
